Showcasing Weak Correlation

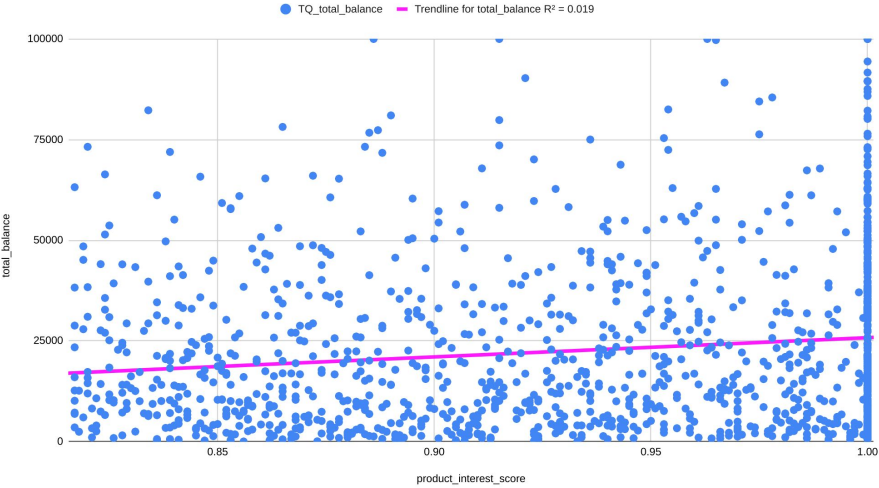

Reliance on averages in Dataset for Segmentation by Interest Score

Correlation R²

	Age	Income	Total Balance	Number of Products	Monthly Txns	Digital Logins (Monthly)	Preferred Channel	Churn
R-Score ALL	-0.01	0.05	0.12	0.01	0.00	0.02	-0.06	-0.02
R-Score TOP	0.00	0.01	0.14	0.04	0.00	0.01	-0.06	-0.01
R-Score BOTTOM	0.03	0.12	0.18	-0.01	-0.01	-0.02	-0.08	-0.02

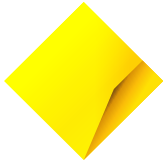

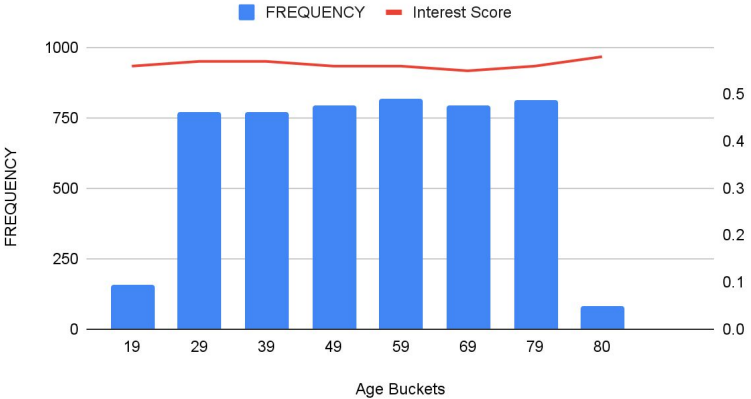

Simple Scatterplot R² = 0.02

TQ Balance VS TQ Product Score

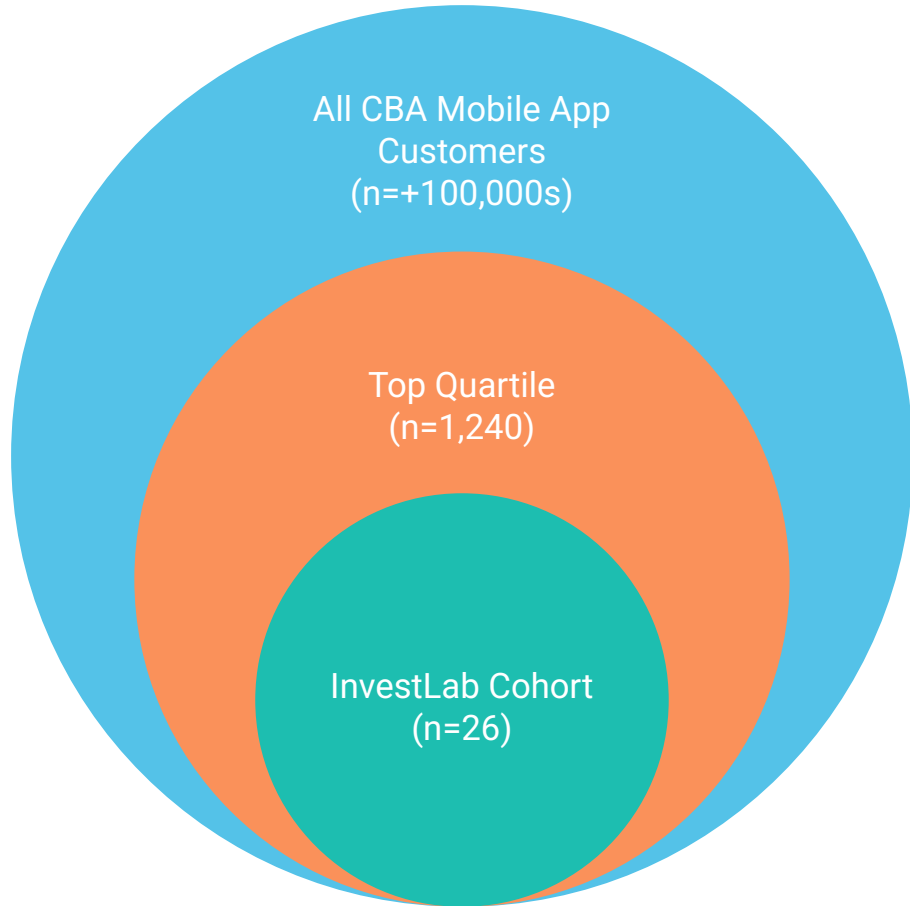

Frequency Flat with no Variation across key Demographics

FREQUENCY vs. Age Buckets

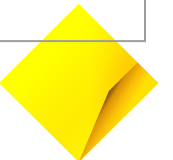

Proposed Forward Strategy for “InvestLab”

Goal: Validate customer experience, adoption, usability & trust

Phase	Proposed Strategy	Go/No-Go Considerations
a) Planning & Prep (W1-W2)	- Recruit pilot cohort - Train branch staff - Prepare support flows - Setup analytics & tracking	- Low cohort recruitment - InvestLab in MVP stage
b) Soft Launch / Dry Run (W3)	Test onboarding flow (2-3 cust)	- Branch interaction & understanding - JTBD clarity (eg: testing \$100 investment)
c) Pilot Launch (W4-W7)	- In-branch onboarding - Ongoing engagement - Monitor & Support	- Initial customer feedback - Initial branch feedback - Completion of test JTBD with CBA funded investment
d) Review & Retrospective (W8)	- Collect structured feedback - Decide go/no-go on TQ launch	- Poor customer NSAT - Scalability & availability of InvestLab - Poor customer clarity on InvestLab value (return use)
e) Top Quartile Launch (W9)	- In-app marketing & branch outreach push to drive customer uptake - Run Phase c in mix of online & in-branch support / enablement - Decide go/no-go on CBA Wide	- Poor customer NSAT - Scalability & availability of InvestLab - Poor customer clarity on InvestLab value (return use)
f) CBA-Wide Launch (W12)	- National Marketing push to App, with in-App notifications - Customer journeys highlighted (JTBD)	- Poor customer NSAT - Scalability & availability of InvestLab - Poor customer clarity on InvestLab value (return use)

CBA Digital Banking Case Study

Situation

CBA is exploring ways to increase engagement and utilization of its digital banking platforms.

CBA has recently introduced a new digital financial planning tool—an intelligent savings and investment recommendation engine integrated into its existing mobile banking app.

The bank’s technology strategy team wants to understand which customer segments are most likely to adopt and benefit from this tool.

The insights will guide the marketing strategy, personalization features, and the product road map.

Objectives

You have been provided with a sample dataset of CBA retail banking customers.

The dataset includes basic demographic information, account balances, transaction history, digital banking engagement metrics (e.g., frequency of mobile logins, website visits), and preliminary product interest scores generated by a predictive model. You will use this data to:

1. Identify key customer segments that show high potential for adopting the new digital financial planning tool
2. Determine what characteristics distinguish these segments
3. Propose strategies to increase the adoption rate of the new tool, including recommendations on marketing channels, UX improvements, or targeted offers

Deliverables

1. Data Analysis

- Perform exploratory data analysis to understand the distribution of customers across demographics, product holdings, and digital engagement
- Identify patterns or correlations between digital engagement (e.g., mobile logins), balances, and product interest scores

2. PowerPoint Presentation

- Prepare a concise presentation (3-5 slides) that summarizes your key findings, insights, and recommendations
- Include charts or graphs to visualize customer segments, adoption potential, and any correlation analysis

3. Live Presentation in 2nd Round Interview

- Present your analysis and recommendations in a structured and compelling manner
- Be prepared to discuss the rationale behind your segmentation, the data-driven insights, and how these recommendations will support the bank’s broader digital strategy
